GTL goes small-scale as oil prices challenge project economics

Interest in small-scale gas-to-liquids (GTL) technology is growing as the first-ever commercial plant comes on stream and structurally lower oil prices challenge the economics of large-scale projects. Over the past five years, several proposed large-scale plants have been cancelled while hardly any new proposals have been put forward. By contrast, after years of development and hundreds of millions of dollars of investment, small-scale GTL is becoming a reality. Gas Matters examines why GTL is challenging the conventional wisdom that bigger is better.
