

The Gas Chain:

From Reservoir to Burner Tip

A 5-day practical and interactive training course giving newcomers a realistic and discerning overview of the gas chain, while providing unparalleled insights into the industry.

6th - 10th September 2010, Barcelona, Spain
6th - 10th December 2010, Munich, Germany

5-day training course

The Gas Chain:

From Reservoir to Burner Tip

About us

Alphatania training from Gas Strategies is a specialist training provider for the global energy industry. We deliver gas and LNG training both as public courses and in-house programmes.

For over 23 years, we have helped energy industry professionals at every level, from new entrants to senior directors; acquire new skills, knowledge and insights. You will find Alphatania alumni working in – and leading – the world’s most innovative and profitable energy companies.

Alphatania Training 2010

Europe:

The Fundamentals of Commercial Gas Storage

26th - 27th October 2010, Budapest, Hungary

LNG – The Commercial Imperatives

22nd - 26th November 2010, Amsterdam, The Netherlands

Asia Pacific:

LNG – The Commercial Imperatives

23rd – 27th August 2010, Hong Kong

Global Gas Markets

6th - 8th October 2010, Singapore

Introduction

The Gas Chain

If you are new to the energy business, moving into the energy business from elsewhere in the industry or looking to broaden your understanding of energy and LNG around the globe, The Gas Chain is an essential course.

From untapped reserves to market trading, this five-day course takes you through every stage of the gas chain. Exploration, development and production; pipelines, storage and LNG; and markets, trading and contracts are all covered.

During The Gas Chain you will learn how the different links in the chain work together and where companies create value. The course is delivered through interactive workshops, presentations, group exercises and multimedia.

Experience real-life business scenarios

The Gas Chain includes three exercises set in the fictional region of Gazania. These exercises will enable you to understand the issues and dilemmas facing the world’s energy companies.

Exercise 1: Gazania investment options

How big is your appetite for risk? Take a chance on successful upstream development, enter the utility business, or integrate downstream operations.

Exercise 2: Prodonia gas trading

Investigate the problems associated with the international routing and sale of gas between producing areas and a market.

Exercise 3: Marketany gas trading

Hone your trading skills in an out-cry market as you seek to balance a short term supply and demand portfolio.

After the course you will understand

- What natural gas is and how gas reserves are identified, developed, and brought from gas fields to the customer through pipelines and as LNG
- How the gas chain is managed: The commercial gas chain, political factors, tax and royalties
- The principles underlying trading gas contracts, pricing and tariffs
- How gas markets operate globally with a specific focus on Europe and Russia

The course team

Our course faculty combine their active roles within the gas and LNG industry with their training activities. They are globally active in advising major clients through Gas Strategies and bring exceptional experience and insight of the industry.

The Gas Chain team has wide ranging experience across the entire gas chain, with expertise in European, African and Asia Pacific gas markets, supply and demand analysis, commercial trading mechanisms, and upstream and downstream regulation.
