# National Grid forecasts a “manageable” 2011/12 winter for gas and electricity

UK gas and electricity grid operator National Grid is expecting supplies to be “manageable” in winter 2011/12. Its winter gas demand forecast is slightly lower than the 2010/11 weather corrected demand, reflecting a fall in non-daily metered (residential) demand because of higher gas prices and increasing energy efficiency measures. Gas is forecast to be the marginal fuel for power generation, with demands similar to those in 2010/11.
