Eni hits production target early at offshore Egypt field

Eni has begun producing 700 MMcf/d (7.2 Bcm/year or 128,000 boe/d) across seven wells at the offshore Nooros field in Egypt's Nile Delta, just over a year after discovering the resource.

Production has progressed ahead of schedule thanks to and gas produced at Nooros is being treated for domestic consumption at the Abu Madi processing plant. Total output from the field is expected to plateau at 160,000 boe/day in the spring of 2017, Eni said.
