Tlou hails boost in Botswana CBM bounty

Estimates of recoverable gas reserves from an onshore coal bed methane (CBM) project in Botswana have been almost doubled, project operator Tlou Energy said on Wednesday.

Africa-focused Tlou said proved and probable (2P) gas reserves from the Lesedi and Mamba CBM projects were increased by 44% to 3.9 Bcf. Proved, probable and possible (3P) reserves – a potentially more speculative yardstick – shot up 390% to 261 Bcf, compared to previous studies.
