Global gas production to fall from 2020 as world nears ‘peak supply watershed’

Gas will become the “largest energy carrier” globally from 2033 but both conventional onshore and offshore gas production will start declining from 2020, according to a new report by Oslo-based DNV GL.

Production decline is linked to a forecast peak in world primary energy supply, which the company predicts will happen before 2030.

“This will surely be a watershed moment in human history ...
