Output from India's Panna, Mukta and Tapti fields returns to normal following 30% reduction

Gas production from the Panna, Mukta and Tapti fields on India 's west coast has returned to normal after being reduced by nearly 9.5% to 1 MMcm/d due to a leakage, oil company officials said today. State-run company GAIL had declared force majeure for downstream clients after the rupture of a subsea valve lowered production.
