LNG shipping rates in 2012 set to remain high

In visual_editor011, there was a significant increase in demand for LNG vessels which resulted in a marked increase in short-term charter rates. Rates for modern vessels averaged around \$95,000/d, more than double the visual_editor010 rate of \$40,000/d. This trend has continued through into visual_editor01visual_editor. LNG Business Review investigates the reasons behind the hike in charter rates, highlighting changing trends in the structure of the short-term market.
