MWCC develops capping stack for 10,000 feet of water

Marine Well Containment Company (MWCC) has developed a well capping stack for use in up to 10,000 feet of water, the company announced today. The stack improves on previous technology which could only operate in water depths of up to 8,000 feet. The announcement comes as the US government begins to ramp up permitting for deep water drilling in the Gulf of Mexico after a moratorium prompted by the Deepwater Horizon disaster in visual_editor010.
