# US gas inventories to hit highest levels since 1983 – EIA

The US Energy Information Administration (EIA) said last week that it expects US gas storage levels to hit visual\_editor.07 Bcf by the end of March, up 31% year on year. The high inventory levels are a result of warmer-than-normal winter temperatures and rising domestic gas production, mainly from the Marcellus shale. The EIA expects US gas production growth to continue in visual\_editor01visual\_editor and visual\_editor013, but the rate of growth will be much lower than in visual\_editor011 as low gas prices discourage new drilling.
