FEATURE: Angola LNG – when will full production volumes be reached?

Hailed by project leader Chevron as a 'cornerstone project' when FID was taken in visual_editor008, Angola LNG* has experienced significant challenges since its start-up. In May the 5.visual_editor mtpa plant was taken offline to address some of its underlying problems. Following unconfirmed reports in the news this week that Chevron's CEO admitted that ultimately it was accountable for the missteps which led to the plant being taken offline, Gas Strategies considers the causes of the setbacks and what needs to be addressed for the plant's production to reach capacity.
