Long-term demand hinges on coal-to-gas switching – Cedigaz forecast

Global gas demand is projected to grow by 1.6%/year over the next two decades thanks in particular to China and the Middle East, while primary demand rises by just 1%, Cedigaz said in its latest Medium and Long-Term Gas Outlook.

The Paris-based gas information group predicted that the world's primary mix in 2035 would be more or less evenly split four ways between gas, oil, coal and aggregated non-fossil fuel sources like nuclear, hydro and renewables.
