Chevron starts production at UK North Sea field

US multinational Chevron has started production from the Alder gas and condensate field in the North Sea, more than 40 years after its discovery.

The Alder project – a single subsea well tied to the existing ConocoPhillips-operated Britannia Platform via a 28 km pipeline – can produce up to 110.1 Bcf/d (1.13 Bcm/year), Chevron said. Production is expected to gradually ramp up over the coming months.
