LNG in the UK – Part two: Heyday over the horizon

LNG has enjoyed only muted growth in the UK to date, crowded out by reliable pipeline supplies and ample storage that historically have proven cheaper and more convenient than liquefied imports.

But if these long-standing pillars of British energy security weaken over the longer term, LNG could be well placed to take advantage and fill in any supply shortfall at relatively short notice.

The second of this two-part feature examines the opportunities for LNG offered by longer-term energy market issues. Part one can be read [here](#). [1]
