The US natural gas bull run has stumbled even before winter fully arrives, as forecasts of warmer weather yesterday plunged benchmark Henry Hub by 4.4% to close the session at USD 2.59/MMBtu, a more-than six-week low. The December contract has lost 15% since it peaked at USD 3.03/MMBtu on 11 November 2020.

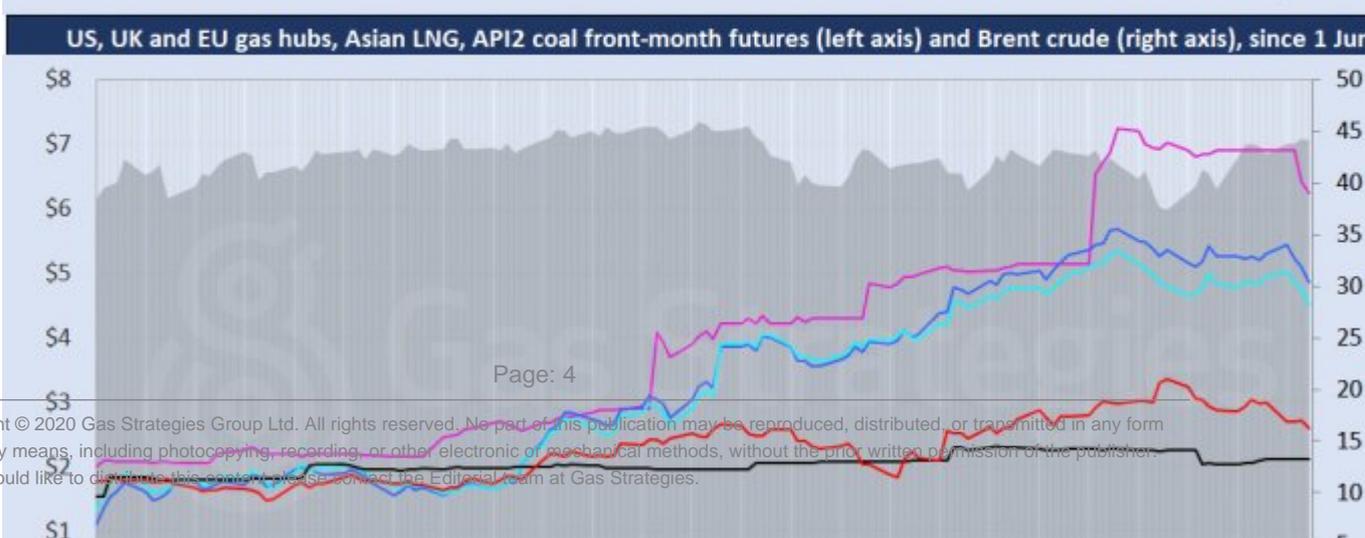

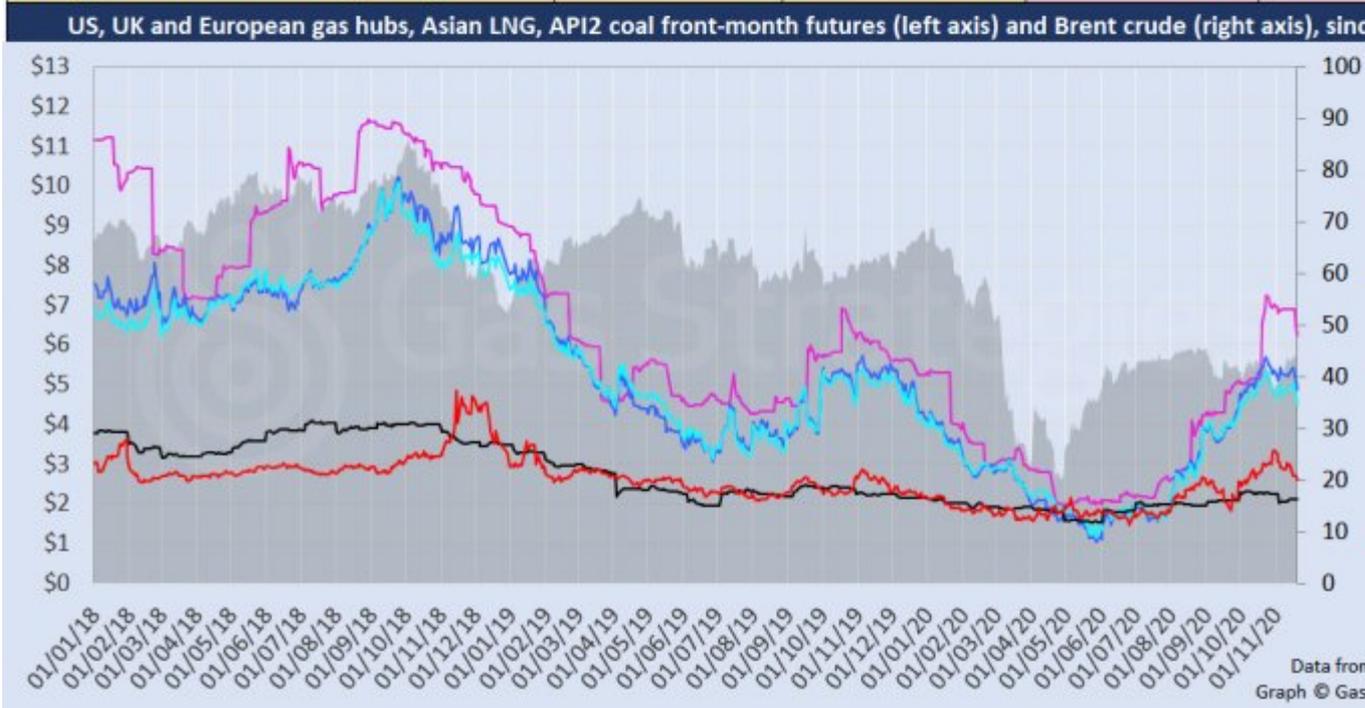

European gas hubs UK NBP and Dutch TTF were also deep in the red on Thursday, falling by 4.1% and 4.8% to settle at the equivalent of USD 4.87/MMBtu and USD 4.52/MMBtu, respectively. The Asian LNG price also continued falling, as CME's January-dated JKM contract fell 2.8% to USD 6.25/MMBtu.

Crude oil prices softened slightly in yesterday's session as near-term fears over Covid-19 lockdowns offset growing hopes of a Sars-Cov-2 vaccine being rolled out in the New Year. Brent and WTI closed at USD 44.20/barrel and USD 41.74/barrel, down by a fraction of a percent on the previous closing price.

The European carbon relinquished recent gains, as month-ahead ETS allowance (EUA) futures fell 3.1% to close at EUR 26.35/tonne.
