Crude prices fell by more than USD 1/barrel to end the week, with growing Covid-19 cases in the north of China – seen as the major oil demand driver – the main factor behind the crude price slump. Three cities in China, including Shijiazhuang – the capital of Hebei province – Xingtai and Langfang, have been placed under fresh lockdowns, leading to over 20 million people being told to stay at home.

News of the fresh lockdowns in China saw front-month Brent and WTI both fall by 2.3% on Friday, with Brent closing in the USD 55/barrel range for the first time in four days.

European gas prices fell for a third consecutive day on Friday amid expectations of milder weather, which is expected to ease gas demand. Front-month UK NBP and Dutch TTF closed 6.6% and 5.8% lower respectively to settle at the equivalent of USD 8.07/MMBtu and USD 7.16/MMBtu, respectively.

CME's month-ahead JKM started to fall on Friday, with the price closing 1.4% lower to end the week. US natural gas benchmark Henry Hub stopped the rot, closing 2.7% higher on Friday to settle at USD 2.74/MMBtu.

The European carbon price fell for a third day, closing 5.3% lower on Friday.
