[1]

Crude prices crashed on Tuesday, with front-month prices falling by USD 3.80/barrel amid fresh Covid-19 related lockdowns across Europe and sluggish vaccination rates across much of the region.

Front-month Brent and WTI prices fell to their lowest since 8 February, with Brent settling at USD 60.79/barrel and WTI closing at USD 57.76/barrel.

Prices slumped amid Germany – Europe's largest oil consumer – and the Netherlands following European peers France and Italy in imposing fresh Covid-19 related lockdown measures in a bid to curb soaring Covid-19 cases.

Berlin said lockdown measures, which were set to end on 28 March, will now be extended until 18 April. In the Netherlands, Prime Minister Mark Rutte announced that lockdown measures will remain in place until 20 April. The government also extended its advice against international travel until mid-May.

Sluggish vaccination rates in Europe are also weighing on the economic and crude demand recovery. Only three nations in Europe – Malta, Serbia and the UK – have managed to give a single dose of a covid-19 vaccine to over 30% of their population. As for the 27 EU member states, only 10% of the adult population has received a first dose of a covid-19 vaccine, according to the European Centre for Disease Prevention and Control (ECDC). In comparison, approximately 25% of the population in the US had received at least one dose of a covid-19 vaccine, as of 22 March.

Also weighing on oil prices was news that crude inventories in the US increased for a fifth straight week.

The American Petroleum Institute (API) reported on Tuesday that crude storage increased by ~2.9 million barrels for the week ending 19 March. The increase was much higher than the 272,000 barrels increase that analysts had predicted.

Oil prices were rallying on Wednesday amid news of the Ever Given containership running aground in the Suez Canal on Tuesday morning. Efforts to re-float the containership could take two days, according to reports, with the canal handling around 10% of total seaborne oil trade and 8% of LNG trade.

With Brent and WTI falling by ~USD 8/barrel and ~USD 7/barrel respectively over one week, all eyes will be on the OPEC+ meeting next week. Reports suggest Saudi Arabia may again decided to maintain its unilateral production cut in light of the bearish demand-side outlook.

Whist oil slumped on Tuesday, European gas prices rallied for a second day. The front-month NBP and TTF contracts rallied by over 1%, with both markers settling at the equivalent of ~USD 6.4/MMBtu.

The European carbon price, which has been rallying in line with rising gas prices, slumped by 3.3% on Tuesday to settle back in the EUR 41/tonne range.

US gas benchmark Henry Hub failed to maintain gains recorded on Monday, with the marker falling by 2.9% to close at USD 2.51/MMBtu.

JKM continued to rally, rising by 3.5% to settle in the USD 6.8MMBtu range. The rally may extend on Wednesday due to blockage in the Suez Canal.
