Crude prices hit a seven-day high on Tuesday as tensions in the Middle East and an expected draw on US oil storage outweighed bearish demand-side factors including spiralling Covid-19 cases and stalling vaccine rollouts.

The front-month Brent contract closed 0.6% higher on Tuesday to settle at USD 63.67/barrel, with US crude benchmark WTI returning to the USD 60/barrel range after rallying by 0.8%.

The rally was due to Yemen-based Houthi rebels claiming that they had fired missiles and drones on Saudi Aramco's refineries in the coastal cities of Jeddah and Jubail. Saudi Arabia is yet to confirm the attack.

Expectations of a third straight week of draw downs from US storage and a bullish demand forecast also aided the crude price rally.

US crude inventories fell by 3.6 million barrels in the week ending 9 April, data from the American Petroleum Institute shows, according to Reuters on Wednesday. The drop is much higher than the 2.9 million barrels draw that analysts polled by Reuters had expected.

Tuesday also saw the Organization of the Petroleum Exporting Countries (OPEC) revise upwards its global crude demand forecast for 2021. The crude cartel now expects demand to increase by 5.95 million barrels/d in 2021 – up 70,000 barrels/d from its previous forecast in March.

European gas prices failed to maintain their rally, with the front-month UK NBP and Dutch TTF contracts falling by 1.1% and 0.7% respectively.

The European carbon price followed suit, falling 1.4% from Monday's record high to close at EUR 43.76/tonne.

In the US, gas benchmark Henry Hub rallied by 2.3% to close at USD 2.62/MMBtu – its highest close since 1 April.

The month-ahead JKM contact continued to tick higher, recording a 0.1% increase to close at USD 7.02/MMBtu.
