European gas prices continued to fall on Monday, despite Germany's energy regulator sounding a doubtful tone over future flows through the Nord Stream 1 (NS1) pipeline, which went offline yesterday to undergo planned maintenance.

The front-month TTF and NBP contracts fell by 13.9% and 6.8% respectively on Monday. The Dutch gas benchmark settled at the equivalent of USD 48.63/MMBtu, with the UK gas marker closing at USD 26.45/MMBtu.

The plunge was pinned on Canada agreeing to release a turbine for the Nord Stream 1 pipeline, with Siemens having sent the kit to Montreal for maintenance. Ottawa's sanctions against Russia have prevented the turbine leaving the nation, with Gazprom having reduced NS1's capacity in recent weeks, citing the need for the turbine.

The release of the turbine has eased some supply concerns, however Germany's energy regulator, the Bundesnetzagentur, said on Monday that the gas supply situation in Germany is "tense" adding that "a worsening of the situation cannot be ruled out."

While gas prices in Europe slumped further, US gas benchmark Henry Hub bounced back, closing 6.5% higher at USD 6.43/MMBtu. Mirroring Europe, much of the US is being gripped by a heatwave, which is driving cooling demand.

The Electric Reliability Council of Texas (ERCOT), operator of the Lone Star state's power grid, urged

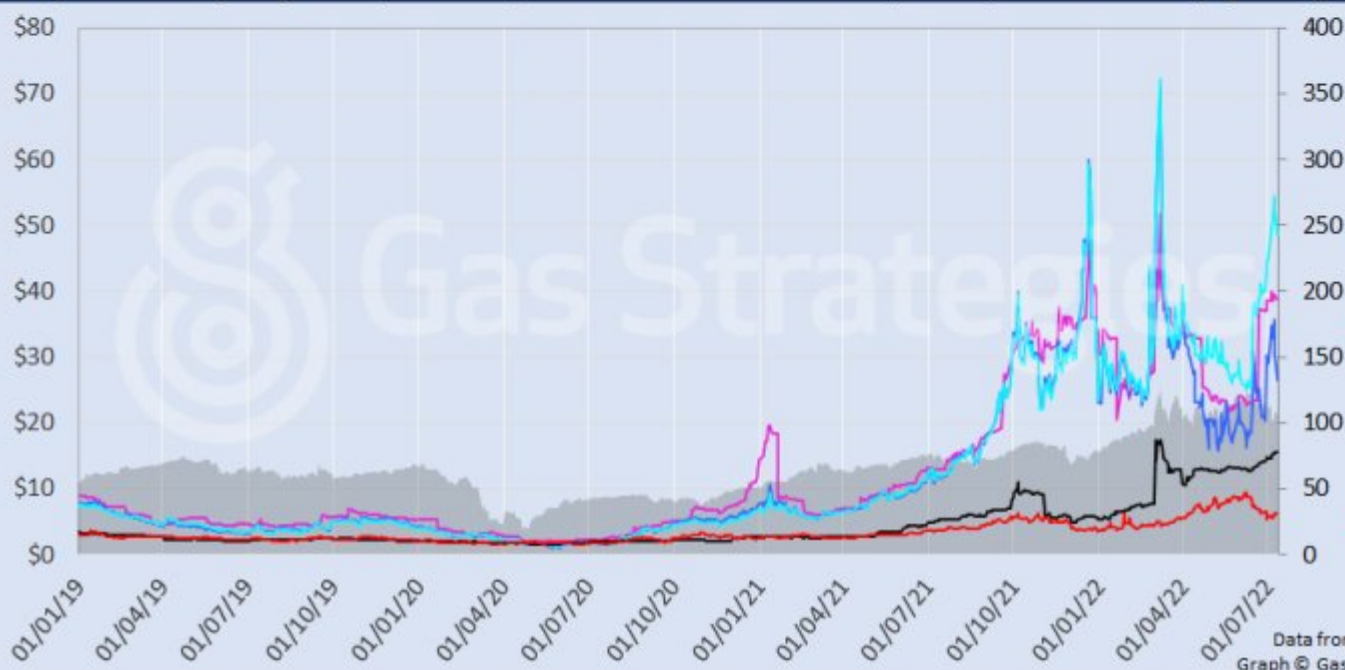

consumers to conserve electricity usage on Monday between 2-8 pm as extreme heat was expected to see demand come close to available generating capacity. ERCOT made the appeal again on Tuesday morning.

As for oil, prices diverged but remained stable. Brent fell 0.1% and WTI was down 0.7%.
