European gas prices continued to climb on Friday, with UK benchmark NBP settling at a four-month high.

UK gas benchmark NBP climbed for a fourth straight day on Friday, settling at the equivalent of USD 37.52/MMBtu. The rally saw NBP cut TTF's premium to USD 10.39/MMBtu, with the Dutch marker settling 3% higher day-on-day on Friday.

NBP's strong gains last week were pinned on outages on the IUK and BBL pipelines, which curbed exports to continental Europe and meant the UK was well supplied. One trade source suggested the market is also starting to price in some maintenance activity planned across the UK Continental Shelf in August.

As for TTF, the marker climbed on the back of uncertainty over Nord Stream 1 flows. Russian President Vladimir Putin last week suggested NS1 flows could be cut this week, citing the need for further maintenance.

In the US, gas benchmark Henry Hub bounced back, closing 4.6% higher at USD 8.3/MMBtu – marking its highest close since 13 June. The rally was pinned on robust cooling demand due to a heatwave gripping much of the US. Concerns over storage levels also provided support.

As for oil, prices continued to fall. Brent closed 0.6% lower at USD 103.2/barrel, with WTI down 1.7% at USD 94.7/barrel.
