Global natural gas prices plunged on Friday, as wind power generation prevailed in Europe and US production kept outpacing demand.

The Dutch TTF saw a 3.1% decline to US 20.54/MMBtu, while the UK's NBP fell 2.8% to USD 19.82/MMBtu.

The plunge comes amid strong wind levels delivering a relief to prices. Germany's windfarms produced 71% of electricity fed into the grid from wind on Friday, followed by a 45% share in the UK, according to WindEurope. Europe's largest wind power generation country Denmark saw its share surge to 116% on Friday.

Meanwhile, the Asian LNG marker JKM was relatively flat, up 0.2% to USD 26.81/MMBtu.

Henry Hub's front-month contracts traded at 3.42/MMBtu on Friday, down 7% day on day. US gas prices have halved in less than a month, and experts predict declines are set to continue this year on production growth continuing to outpace demand growth.

Oil prices settled higher on Friday on the US dollar's drop to a seven-month low and more indicators pointing towards growing demand from top oil importer China, according to Reuters.

Brent was up 1.5%, settling at USD 85.28/barrel, while WTI rose 1.9% to USD 79.86/barrel.
