US spot natural gas prices surged on Thursday despite another big storage injection, while European prices remained relatively flat as market fundamentals kept price swings intact.

The Henry Hub saw an 11.2% rise to USD 2.36/MMBtu, with the price finding some ground after being at some of its lowest levels since the Covid-19 pandemic.

This came despite the EIA storage report, which revealed that inventories for the week ending 21 April rose by a slightly higher-than-expected 79 Bcf, thus expanding already hefty surpluses even further less than a month into the injection season, reported Natural Gas Intelligence.

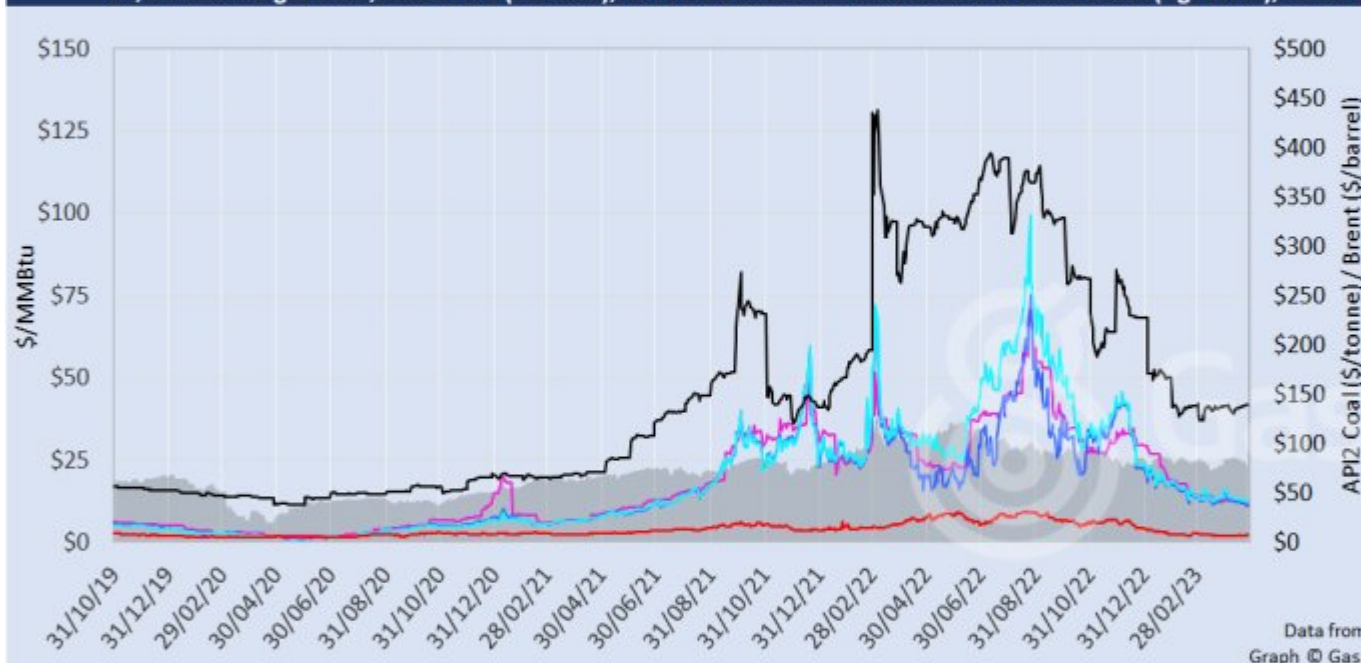

In Europe, the price movements were weak, with only TTF settling higher at USD 12.61/MMBtu, and NBP remaining flat. Market fundamentals – high stocks and falling demand – have remained strong, hence the little change in quotations on Thursday.

Similarly, JKM saw a minor 0.4% fall to USD 11.60/MMBtu.
